

## Grading Rubric for the Term Project

Criteria	Points (90 possible)
At least 5 kinds of widgets (preference controls count too)	5
A menu (on the action bar) with at least two items on it.	4
Each menu item should do something: start an activity, display settings, or display a dialog.	6
An up button on the action bar of secondary activities	5
At least 2 activities, or 2 fragments	15
Separate layouts for landscape and portrait orientation in at least one activity	10
Persist activity state when rotating	10
Do all the applications other features work correctly?	25
Does the code conform to “best practices”? Check for all best practices, but especially note whether or not there is good separation of concerns- code for the UI, business logic, and data access (data access means: file, web service, or database i/o) should be in a separate class as much as possible. Note that some of these classes, like the classes derived from AsyncTask will most likely be nested inside an Activity and this is OK.	10
